

Step 1: Create a Google Play Developer Account

- Go to: <https://play.google.com/console>
- Pay the \$25 one-time registration fee
- Fill in your developer profile

Step 2: Prepare the App

Update pubspec.yaml

```
version: 1.0.0+1 # format: versionName+versionCode
```

Update android/app/build.gradle

```
android {  
    defaultConfig {  
        applicationId "com.yourcompany.prantomoto"  
        minSdkVersion 21  
        targetSdkVersion 34  
        versionCode 1  
        versionName "1.0.0"  
    }  
}
```

Update app name in AndroidManifest.xml

```
<application android:label="ProntoMoto" ...>
```

Step 3: Generate a Keystore (Sign the App)

Run this ONCE and keep the .jks file safe forever:

```
keytool -genkey -v -keystore ~/upload-keystore.jks \  
-keyalg RSA -keysize 2048 -validity 10000 \  
-alias upload
```

Create android/key.properties

```
storePassword=<your-password>  
keyPassword=<your-password>  
keyAlias=upload  
storeFile=C:/Users/ASUS/upload-keystore.jks
```

WARNING: Add key.properties and *.jks to .gitignore -- never commit these!

Update android/app/build.gradle to use keystore

```
def keystoreProperties = new Properties()  
def keystorePropertiesFile = rootProject.file('key.properties')  
keystoreProperties.load(new FileInputStream(keystorePropertiesFile))  
  
android {  
    signingConfigs {  
        release {  
            keyAlias keystoreProperties['keyAlias']  
            keyPassword keystoreProperties['keyPassword']  
            storeFile file(keystoreProperties['storeFile'])  
            storePassword keystoreProperties['storePassword']  
        }  
    }  
}
```

```
}  
  buildTypes {  
    release { signingConfig signingConfigs.release }  
  }  
}
```

Step 4: Build the Release App

Recommended - App Bundle (AAB):

```
flutter build appbundle --release
```

Output: build/app/outputs/bundle/release/app-release.aab

Step 5: Add App to Play Console

1. Go to Play Console -> Create app
2. Fill in: App name, Default language, App/Game, Free/Paid
3. Complete all policy declarations

Step 6: Set Up the Store Listing

Go to Store presence -> Main store listing and fill:

- App name, short description, full description
- Screenshots (phone, 7" tablet, 10" tablet)
- App icon: 512 x 512 PNG
- Feature graphic: 1024 x 500 PNG

Step 7: Upload the AAB

1. Go to Production -> Create new release
2. Upload the .aab file
3. Add release notes (what's new)
4. Review and roll out

Step 8: Complete Required Sections

Play Console will block publish until these are done:

- App content: Privacy policy URL, ads declaration, target audience
- Content rating: Fill the questionnaire
- Target countries: Select where to distribute
- Pricing: Free or paid

Quick Checklist

- [] Developer account created (\$25)
- [] applicationId is unique (e.g. com.prontomoto.app)
- [] Keystore generated & backed up safely
- [] key.properties added to .gitignore
- [] flutter build appbundle --release succeeds
- [] Store listing complete (icon, screenshots, description)
- [] Privacy policy URL ready
- [] Content rating questionnaire done
